The measurements specified are calculated average values and may differ slightly in the product (± 2 % ± 5 cm).

The height measurements are based on the M4 ground socket. These deviate insignificantly between base versions.

The maximum permissible wind speed in accordance with the table applies for a horizontally positioned canopy and requires fixed anchorage to the ground. A base with the specified minimum weight is not sufficient.

For multiple parasols, a minimum distance of 20 cm between two parasols, as well as to walls, should be maintained.

Opening and closing using a battery-operated drill is not permitted.
